

Areas most affected by fire in August 2018

The map shows burn severity derived from Sentinel-2 imagery (pre-fire: 19 July 2018, post-fire: 23 August 2018).

dNBR (Differenced Normalized Burn Ratio)

- Low Severity
- Moderate-low Severity
- Moderate-high Severity
- High Severity

dNBR (Differenced Normalized Burn Ratio) is calculated by subtracting the **post-fire NBR** from the **pre-fire NBR** using Sentinel-2 imagery:

$$dNBR = NBR_{pre} - NBR_{post}$$

where NBR is derived from near-infrared (NIR) and shortwave infrared (SWIR) bands:

$$NBR = (NIR - SWIR) / (NIR + SWIR)$$
